Non-GAAP Financial Measures

EBITDA and Adjusted EBITDA are non-GAAP financial measures. GAAP refers to accounting principles generally accepted in the United States of America. EBITDA is defined as net income (loss) excluding income taxes, interest and other non-operating items and depreciation and amortization. Adjusted EBITDA further adjusts for the change in fair value of common stock warrants and non-cash stock-based compensation expense.

These non-GAAP financial measures and quarterly trends are presented to provide information that may assist investors in understanding the Company's financial results and assessing its prospects for future performance, but should not be read as a guarantee of future performance or results. We believe these non-GAAP financial measures are important indicators of our operating performance because they exclude items that are unrelated to, and may not be indicative of, our core operating results. These non-GAAP financial measures, as we calculate them, may not necessarily be comparable to similarly titled measures of other companies and may not be appropriate measures for comparing the performance of other companies relative to the Company. These non-GAAP financial results are not intended to represent, and should not be considered to be more meaningful measures than, or alternatives to, measures of operating performance as determined in accordance with GAAP. Investors are referred to the Company's filings with the Securities and Exchange Commission for additional information regarding limitations of these non-GAAP financial measures.
